print(2+3)
```

5

VARIABLE

Variable are used for storing purpose. Let consider "a = 2" , 'a' is the variable name and 2 is the value stored in that variable

```
In [5]: a = 5           #variable 'a ' stores the value 5  
print(a)          # value stored in 'a' is printed using print statement
```

5

```
In [6]: a = 10          #variable 'a' stored the value 10  
b = 5              #variable 'b' stored the value 5  
print( a + b)      #the addition of a and b will printed using print statement
```
